

# FGC LIMITED

The Boar Cart is remote-controlled, articulated and self-guided and exposes the boar to sows by snout-to-snout contact. Optimizing sow fertility and heat detection while making work easier. Its operation requires one worker. Its rigorous construction along with top quality electronics, electrical and mechanical components assures precise, efficient and reliable operation of cart. Available in stainless steel or galvanized. Most efficient sow stimulation, heat check and heat return detection system on the market!
