“Control Your Medications”

A great choice to reduce your water management Headaches.
When your pigs' health is a concern you need an accurate and reliable system that can help reduce your medication waste, and get your swine operation back on track quickly and effectively.

The **Chemilizer** is a 2 part system of Water Motor and chemical pump. No chemicals go inside the water motor and are not effected by sandy or dirty water. The durable ceramic sleeve extends the pump life and enhances performance. The Water Motor has a durable rubber diaphragm; there is no sliding piston to wear out. It is not affected by chemicals since chemicals are injected directly into the waterline for mixing. Chemical Pump twists in and out of the water motor. The Chemilizer is easy set up and maintain due to non-electric injectors and a two part system
